

Yoshida Motors — End-to-End System Workflow

This document outlines the complete operational flow of the Yoshida Motors ecosystem, connecting the **Customer Mobile App** experience with the **Admin Web Dashboard**. It is designed for stakeholders to understand the business process from start to finish without technical jargon.

Phase 1: Customer Onboarding (Mobile App)

The journey begins when a customer downloads the Yoshida Motors mobile application.

1. Account Creation & Login

- **Sign Up/Login:** Customers can sign up or log in using their **Email** or **Google Account**.
 - **Security:** The app ensures a secure session. If a user logs out, they must log in again to access features.
 - **Profile Setup:** Upon first login, users complete their profile with essential details: Name, Address, Gender, and Birth Date. This ensures meaningful data for future transactions.
-

Phase 2: Appraisal Submission (Customer Action)

The core feature is the vehicle appraisal system, allowing customers to get a price offer for their car.

1. Starting a New Request

- From the **Home Dashboard**, the customer taps **"Start New Appraisal"**.
- The system checks if their profile is complete before proceeding.

2. Step 1: Vehicle Information

- The customer enters details about their car:
 - **Brand & Model** (e.g., Toyota Camry)
 - **Year of Manufacture**
 - **License Plate** (optional)
 - **Mileage** (optional)
 - **Notes:** Any special condition or comments (e.g., "Scratches on bumper").
- This data is saved locally on their phone as they type.

3. Step 2: Vehicle Photos (Crucial Step)

- The customer must upload at least one photo (maximum 7).
- **In-App Camera:** They can take photos directly within the app.
- **Gallery Upload:** Alternatively, they can select existing photos from their phone.
- **Labeling:** Each photo requires a category label (e.g., "Front View", "Interior") to help the admin assess the condition.

4. Step 3: Review & Submit

- A summary screen displays all entered info and photos.
 - **Save as Draft:** If not ready, the customer can save it as a "Draft" to finish later.
 - **Submit:** Once confirmed, the customer submits the appraisal.
 - **Outcome:** The status changes to **Submitted** (Blue). The customer sees this on their dashboard.
-

Phase 3: Administrative Review (Admin Web Panel)

Once a customer submits a request, the action shifts to the Yoshida Motors staff using the web-based Admin Panel.

1. Notification & Dashboard

- **Alert:** The dashboard statistics update immediately to show a new "Pending Review".
- **Dashboard View:** The admin sees the new request in the "Recent Submissions" list or the full "Appraisals" menu.
- **Status Indicators:** The new request appears with a **Submitted** badge.

2. Review Process

- The admin opens the request details.
- **Vehicle Data:** They review the car's Brand, Model, Year, and customer notes (ReadOnly).
- **Photo Inspection:** They inspect the uploaded photos in high resolution to assess the vehicle's condition.
- **Status Update:** The admin changes the status to **Under Review** (Yellow).
 - *System Action:* The customer receives a notification on their phone: "Your appraisal is now being reviewed."

3. Decision Making

The admin has two primary outcomes:

Outcome A: Make an Offer (Complete)

- The admin determines the car's value.
- They enter the **Offered Purchase Price** (e.g., ¥1,500,000).
- They can set a **Price Validity Date** (e.g., valid for 7 days).
- Admin changes status to **Completed** (Green).

Outcome B: Reject the Request

- If the vehicle doesn't meet criteria (e.g., too old, missing info), the admin rejects it.
- Admin changes status to **Rejected** (Red).
- **Mandatory Note:** The admin must write a reason (e.g., "Photos are too blurry" or "We do not accept cars older than 2005").

4. Completion

- The admin clicks "**Save Changes**".
- The system automatically sends a detailed **Push Notification** to the customer.

Phase 4: Customer Result & Offer (Mobile App)

The customer is alerted to the admin's decision and returns to the app.

1. Receiving the Result

- **Notification:** A message pops up on their phone (e.g., *"Good news! Your vehicle appraisal is complete."* or *"Update on your appraisal"*).
- **In-App List:** When opening the app, the appraisal card on the Home Screen updates its color and status.

2. Viewing the Details

The customer taps "View Details" to see the outcome:

- **If Offer Made (Completed):**
 - They see a large green banner with the **Offered Price** in Yen.
 - A **"Next Steps"** guide appears, instructing them on how to proceed with the physical handover and payment collection.
- **If Rejected:**
 - They see a red banner.
 - The **Rejection Reason** written by the admin is displayed clearly.
 - They typically start a new appraisal with better data.
- **If Under Review:**
 - They see a yellow banner asking for patience, with an estimated wait time or contact button.

Summary of Status Lifecycle

Status	Color	Who Acts?	Description
Draft	Gray	Customer	Saved on phone, not yet sent to Yoshida Motors.
Submitted	Blue	Customer	Sent to system, waiting for Admin to open it.
Under Review	Yellow	Admin	Admin has opened it and is currently assessing value.
Completed	Green	Admin	Final Offer Made. Price is visible to customer.
Rejected	Red	Admin	Request denied. Reason provided to customer.

System Management (Admin Only)

Beyond individual appraisals, the Admin has tools to manage the ecosystem:

- **User Management:** View all registered customers. Admins can manually add users or update their details if a customer calls in for support.

- **Notifications Center:** A global inbox for the admin to track system events and history.
- **Manual Appraisal Creation:** If a customer walks into the physical shop, an Admin can manually create an appraisal record on their behalf directly from the web panel.
